

COMPANY PROFILE

At DAYWALK, our drive is to protect lives, through innovative engineered solutions and preventative safety training. We value life and well-being foremost and are accountable for the safety of others. We continue to work with industries and people who share in our united vision.

**BE
ASSURED**

At Daywalk, we strive to understand the strategic objectives our customers are working to achieve - whether it be a CEO, manager or superintendent. Through open collaboration, we gain profound insights into specific logistical needs and design end-to-end protective preservation and storage systems for critical spares and equipment both in a storage or transportation environment.

DESIGN > LOGISTICS

Our collaborative challenges are approached knowing full well that upon resolution, an opportunity awaits. It's through this calculated curiosity that we continue to discover and deliver innovative solutions for some of the world's largest multinationals in the heavy industrial sector.

We're in the business to design logistics.

PEACE OF MIND

We take our customers' need for trustworthy systems seriously because at the end of the day, safety should always be the top priority.

It's a dual responsibility to ensure that every logistical solution not only meets operational, time and budgetary requirements, but equally as important, upholds our 'You're Safe' philosophy.

Everything we do at customer and company customer level is designed to respond optimally to certified safety and compliance standards - our mission is built on a foundation to protect people first.

We're in the business of creating peace of mind.

IDENTIFY > SUPPLY > APPLY

No company can thrive unless it has an accurate reading on its real-time operating status, 24/7. Ongoing processes and performance need to be monitored and improved upon to create efficiencies that maximise output while minimising waste.

The professional Daywalk team helps customers clearly identify their unique challenges and opportunities, then collaboratively creates strategic logistical systems that deliver on mutually confirmed performance and budgetary objectives.

THE THING > 24/7

The Thing never rests...

- > It's in our products.
- > It's in our processes.
- > It's in our people.

The Thing is always with customers...

- > When they need it.
- > Where they need it.
- > The way they need it.

We always ask...

What's the status?
Where do you need to get to?
How are we going to get there?

SIMPLE. DAYWALK.

We're in the business to identify, supply and apply.

We're in the business to innovate as the industry evolves.

STORE > SECURE > PROTECT

Formally known as Omni-tuff, Daywalk is the new face of the company as we advance into the next decade with a renewed outlook to grow with our customers.

Our range of systems are designed to enhance safety and minimise waste by facilitating operational and cost efficiencies across the board. Purpose designed, they're engineered to prolong the lifecycle of valuable assets

and protect people in the field through the integration of advanced safety features. Due to our extensive product range, we have the unmatched capacity to custom build universal solutions fit for purpose.

Daywalk Solutions

- > OH&S in onsite storage
- > CoR compliance in transport
- > Preservation & rust prevention

We're in the business of storing, securing and protecting

FUTURE PROOF > INNOVATION

Since our humble beginnings in 1999, the Daywalk philosophy has been underpinned by a future-proof focus to innovate. Every team member and supply partner is committed to finding solutions to logistical challenges that universally provide safe and effective operational reliability. Where an industry gap is evident, we strive to fill it with a

system that makes quantifiable improvements to our customers' bottom line. Importantly, we also take extensive measures to innovate solutions that limit wastage by extending the lifespan of heavy machinery through protection and preservation. Forging ahead, we look forward to creating cutting edge industry prospects for the benefit of all.

Collaborative
Purpose

Collective
Potential

We're in the business of setting the industry pace.

INGENUITY > KNOW-HOW > INTEGRITY > DILIGENCE

Daywalk is a fully Australian owned company with a growing global supply chain. Our entire evolution has been built on a foundation of trust from our original engineering service company, SMS Omni-feed, through to Omni-tuff and now Daywalk as we advance to a future fueled by new logistics frontiers.

The Daywalk team always applies steadfast commitment to the design and supply of long-term packaging and protection systems that guarantee peak performance for customers. Through decades of honed experience, we've developed Performance Pillars ensuring we stay on track internally as a company and externally as a

loyal design logistics partner. In a heavy industry world that relies on consistency through reliability, there are no shortcuts. Ingenuity, know-how, integrity and hard work are what get the job done at the end of every Daywalk day.

Daywalk Performance Pillars

People UNIFICATION

Our People First ethos is instilled internally in our culture and externally with clients in a supportive relationship framework built on transparency, integrity and trust. The core principle of safety for all Daywalk people sits at the heart of everything we do.

Communication SERVICE

You can't provide a solid solution without listening to exactly what's required first. The Daywalk team are committed to taking the time to understand clients' unique challenges and responds with accurate logistical solutions tailored to clearly defined deliverables.

Intelligence DESIGN

Great design outcomes are only derived by individuals driven to achieve great results. Our combined team experience compounds into a powerful innovation collective that thrives on the opportunity to design world-class systems that set new industry benchmarks.

Manufacturing QUALITY PRODUCTS

Extensive Daywalk research and development practices have been sharpened over time across the central inputs of skills, materials and technology. Every element of form and function must perform at optimum levels across all environmental conditions: internally or externally, static or transit.

Training SAFETY & COMPLIANCE

Daywalk is an integral link in our clients' supply chain so it's critical all of our systems comply with the highest level safety standards, including Chain of Responsibility (CoR) legislation. In collaboration with official compliance bodies, we help develop stronger safety standards for the benefit of heavy industry, worldwide.

We're in the business of forging strong industry standards.

IMPROVED > PRODUCT > CONQUEST

Daywalk supplies our domestic and global customers with an extensive range of warehouse storage and transport equipment including:

- > Storage solutions
- > Transport units
- > Strapping systems
- > Preservation products

In more recent years, the company has expanded our value proposition with the

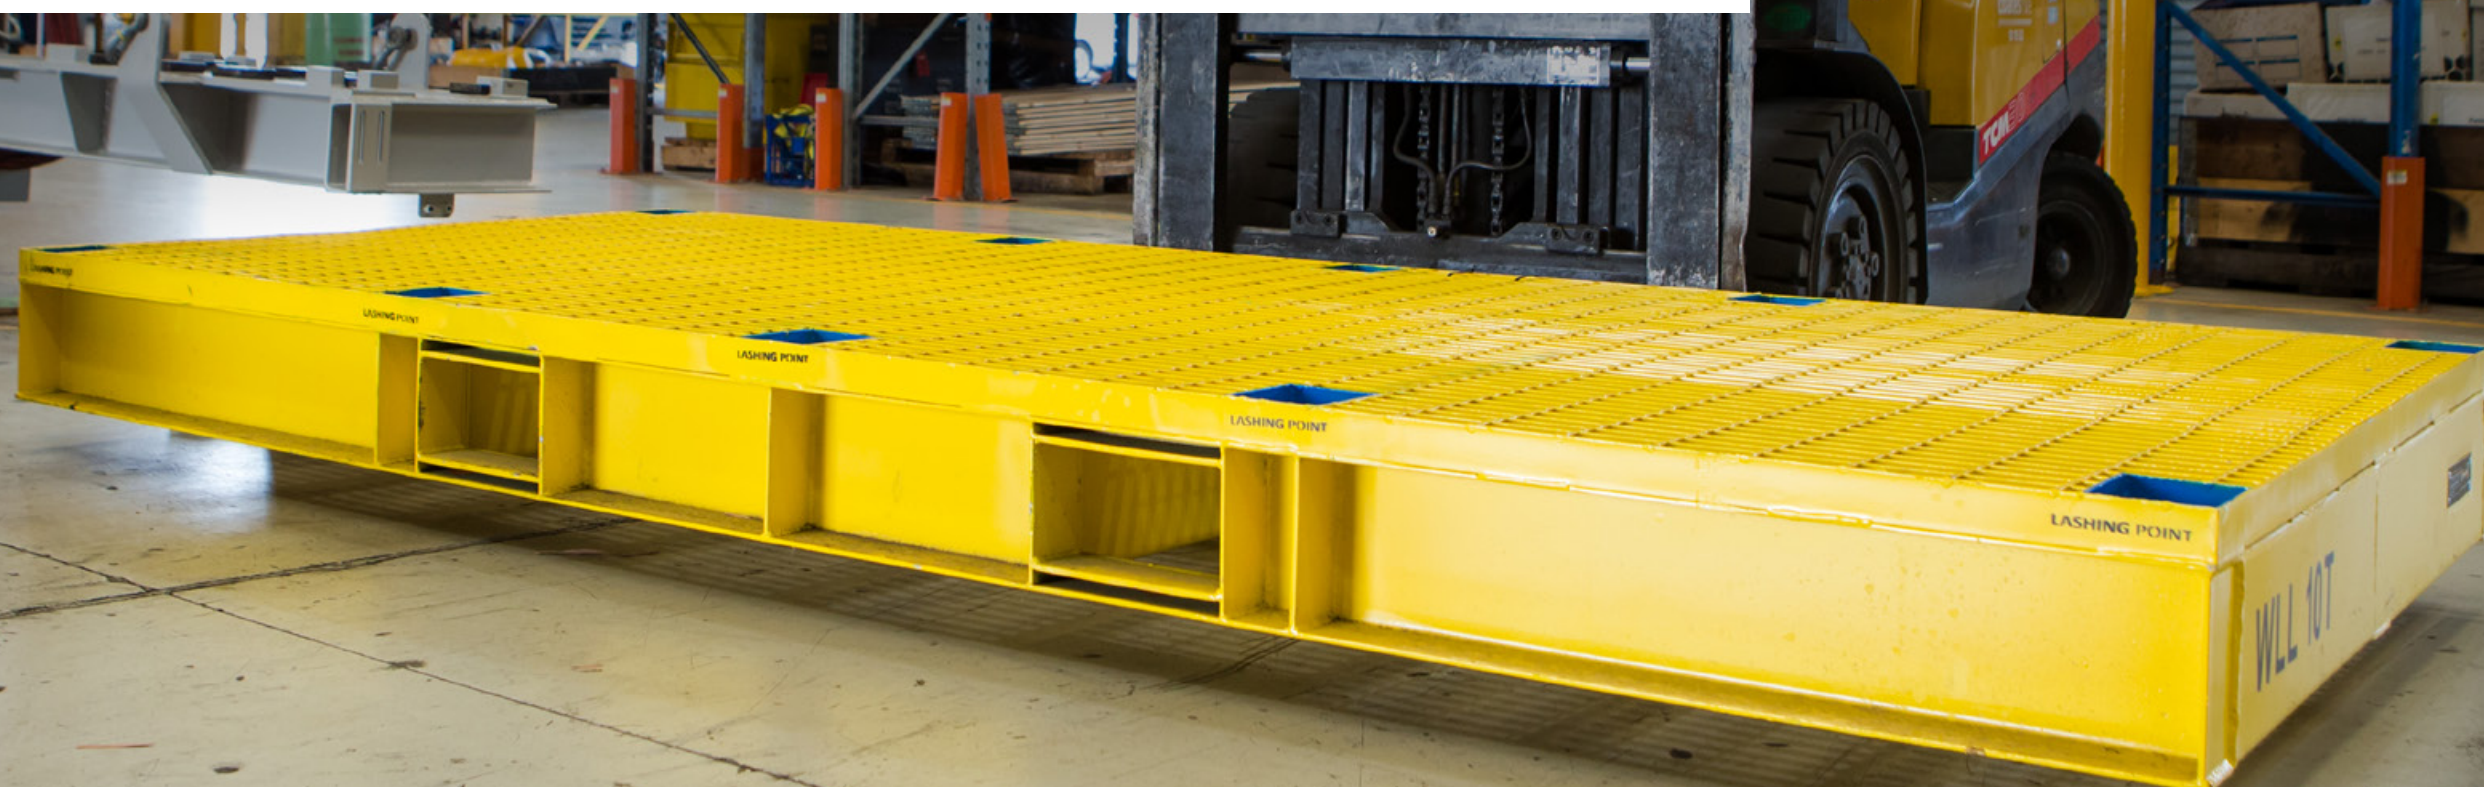

development of engineer designed steel pallets featuring safe load restraint guidelines. The adaptive pallet range has been developed to directly address key legislative changes to Chain of Responsibility (CoR) legislation.

In response to customer demand globally, we've also introduced a flexible paint-on coating, SKN Ultimate Rust Protectant, applied for the protection and preservation of fabricated metals

and steel parts. When the part is ready for use, SKN easily peels off revealing the original machined surface free of corrosion or rust. Always innovating, an aerosol version has been developed for even easier application. The trajectory since product launch has been phenomenal with manufacturing and supply partners now established in Australia and USA.

Daywalk Product Range

- > Steel Pallets & Accessories
- > Steel Cages & Bins
- > Timber Pallets & Collars
- > Plastic Pallets & Bins
- > DG Storage & Transport
- > Safety Strapping & Restraints
- > VCI Protection & Preservation
- > UV Bags & Covers
- > Rust Prevention & Coatings
- > Silica Gel & Breathers
- > Pallet Wrappers & Scales

KNOWING > FRONTLINE > NEEDS

TRAIN > MAINTAIN

Daywalk proactively engages customers with a focused approach to systems-based methodology and risk mitigation. The method we employ is review-based with three core challenges identified:

- > OH&S in onsite storage.
- > CoR compliance in transport.
- > Preservation & rust prevention.

During a customer review, we further collaborate on associated performance areas including:

- > Product selection and use.
- > Relevant new opportunities.

With all key challenges and opportunities clearly identified, we ultimately work with customers to fine-tune deliverables moving forward across:

- > In-stock product solutions.
- > Custom system development.
- > In-stock product solutions and custom system development.

Review

Reassurance

We're in the business of supporting client business.

Aligning with our Review Reassurance Program is a higher-level service available to customers, the Daywalk CoR Training Program. This proactive initiative is intuitively designed to improve Chain of Responsibility awareness, mitigate inherent public safety risks and address any compliance issues customers may face when addressing government regulatory standards in their relevant industry sector.

We're in the business of sharing intelligence.

We apply engineering principles to help make complex topics more practical. During the session, attendees gain a deeper understanding of how the Heavy Vehicle National Law and OH&S applies specifically to their role and they are provided with practical ways to meet their individual obligations.

A Good Example

Issue

Australian transport regulatory fines are now at an all-time high due to accidents caused by the poor restraint of goods on trucks.

Solution

We show customers how to properly strap down loads to avoid such unfortunate and costly incidents.

GLOBAL > INDUSTRY > KNOW HOW

Mining & Earthmoving

- > Rated safety strapping

PAST > PRESENT > FUTURE

BE ASSURED

The company has always shared incredible collaborations with our clients and whole supply chain network. Where we've experienced the real evolutionary change has been progressing from a core product-offer focus to now more of a strategic business partnership saying, "let's take this journey together". Collaboratively, we take long-term storage and transport logistics to new levels by reviewing clients' past operational processes and formulating strategic pathways forward that deliver optimal efficiency, safety and reusability standards. Therein lies the progression of Omnituff to Daywalk.

Gary Menzies

"Let's build something more than we've done before".
