

SHUTDOWN STORAGE: PREVENTING DAMAGE & WAIT TIMES

*Portable, Secure Storage**April 2026***CHALLENGE**

A mining client was concerned about ineffective storage disrupting pre-shut and maintenance operations. Secure-a-move provided the portal storage solution.

**COST DRIVING EFFICIENCY IMPROVEMENTS**

When we connected with our mining client, they were concerned about ineffective storage disrupting pre-shut and maintenance operations. Staff were slowed down by components and gear not being available when they arrived on site. These essential items need to be clean, dry and in good condition. However, there were issues and delays due to insufficient and unsecure storage.

CHALLENGES WITH STORING EXTRA EQUIPMENT**Parts and gear weren't ready due to:**

- Equipment being used by other staff
- Gear going missing
- No secure access at unmanned posts
- Difficulty in organising remote drops
- Wear and tear on items
- Rust and water damage
- Gear covered in dust or dirt

This resulted in operational inefficiencies, as well as parts and gear having to be repaired or replaced.

PRE-SHUT STORAGE SOLUTION

Requiring a more efficient solution, particularly for pre-shuts, we recommended a standard storage product that could be quickly mobilised to a drop off point.

The DAYWALK Secure-a-Move storage is designed to be a robust, portable option with easy access for staff. These sheeted steel stillages are fully enclosed, with padlockable doors and a weather resistant construction, so they can be used in warehouses, yards or drop-off locations.

The gas strut storage boxes provided a quick and long-lasting solution for shutdown storage.

Stackable and secure, they provide storage while taking up minimal floor space.

The boxes can be filled with components and other work related essentials, and padlocked for security.

SHUTDOWN STORAGE: PREVENTING DAMAGE & WAIT TIMES

Portable, Secure Storage

PRODUCT SOLUTION: SECURE-A-MOVE

PREVENTS DAMAGE TO COMPONENTS & GEAR

The sheeted steel design, with rubber seals on the doors offers protection from the weather, dust and dirt.

STACKABLE SECURE DESIGN

Indoor or outdoor site storage. Stackable cage options that provide secure access for designated staff, so work is never delayed.

PALLET STORAGE

The sheeted cage can fit a whole pallet, to cut down handling and stocking time. These solutions are pallet racking compatible.

SMARTER SHUTDOWN ORGANISATION:

- Improves the speed and flexibility of shutdown organisation
- Sheeted cages can be kept in an accumulation yard
- Equipment is secured against misuse or theft
- Items are protected from weather, dust, dirt, and damage
- Provides stable and secure storage cages
- Allows shutdown preparations to begin ahead of schedule
- Delivered items can be placed directly into sheeted cages
- Reduces the risk of items being left in vulnerable positions

Overall, the Secure-a-Move provided a reliable storage solution for teams requiring secure, mobile sheeted cages.

STACKABLE, PORTABLE & FORKLIFT COMPATIBLE

With space at a premium in warehouses and in yards, the Secure-a-Move single level cage offers a stackable model when in use or in storage. They are generally stacked two high but can be stacked four high in some situations.

Due to their sturdy, waterproof design (rubber sealing on door) and engineered long-life coating, they are suitable for drops to multiple points at unmanned posts.

Transportable by forklift or truck, these sheeted boxes can also be filled with an entire pallet of goods, to cut down the time and risk with manual handling.

From cables and filters to maintenance kits and spares, you can store almost anything in these sheeted storage boxes. Any components or gear that are required for the job can be designated to a Secure-a-Move and padlocked for the relevant team member to access.

CONTACT US

With decades of industry experience, DAYWALK offers storage and transport to keep your mining site or OEM moving. The sheeted cages range has three options: a sheeted cage without lid, the Secure-a-Move Single Level, and the Gas Strut for easier access. Our in-stock ranges and unmatched engineering capabilities mean that we can provide a complete transport and storage solution for every operation.
