

Standard Cylinder Frames Help Create Positive Revenue for Workshop

CHALLENGE

A cylinder rebuild workshop was manufacturing their own frames in-house. While this gave them control over their supply, the process was taking valuable manufacturing time away from higher-value work.

STANDARD CYLINDER FRAMES TO REMOVE THE DRAIN ON SKILLED LABOUR

Seeking a more cost-effective way to source the small hydraulic cylinder frames, they contacted DAYWALK for potential solutions. The client stipulated that they required certified cylinder transport and storage without compromising on the size, weight or performance requirements of their operations.

FLEXIBLE CYLINDER PALLETS PROVIDE CONVENIENT, LONG-TERM INVESTMENT

DAYWALK offered the standard Spartan cylinder range to cater for various volumes, sizes and weight requirements of the cylinders. The flexibility of these cylinder pallet models also allowed for other components to be used, such as shafts, bearing housings or anything cylindrical.

The result was a certified, off-the-shelf frame that could be supplied at the same cost or less than the customer's internal manufacturing cost. Our client could stop spending valuable workshop time making cylinder frames and instead use that capacity where it generated greater value for the business.

BENEFITS OF SWITCHING TO STANDARD FRAMES

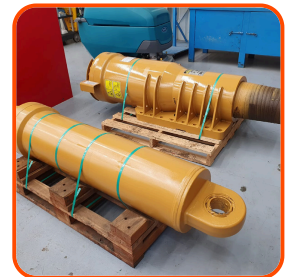

By switching to standardised frames, our client was able to:

- Quickly access certified cylinder frames from DAYWALK
- Reduce the cost of producing cylinder frames in-house
- Remove the internal manufacturing workload
- Free up floor space and storage due to the in-house builds
- Remove the burden of manufacturing frames by replacing with standard DAYWALK frames
- Use that extra workshop capacity to complete more cylinder rebuilds
- Create positive revenue from work that may otherwise have been delayed

Simply put: less time making frames, more time producing positive revenue.

Cylinders of various types, sizes and capacities transported and stored safely on pre-engineered frames.

Custom-built frames or timber pallets can create operational delays due to inefficiency.

Keep Moving

CONTACT US

With a range of standard and adjustable cylinder pallets in stock and ready to go, there's no need to wait for fabrication or tie up your team with making frames in-house. Our standardised cylinder pallet range gives you a cost-effective, certified solution when you need it.
